Subject: Portland Harbor oversight update

Good morning,

The first composite sample, SG-239, was just collected by the Tieton at approximate RM 8E. All 3 subsamples making up the composite had 32-33 cm recovery. They are targeting locations with soft sediment to avoid issues with insufficient recovery.

Attached are photos of sediment collection procedures, including measurement of recovery depth. Also included is a photo of subsamples prior to compositing (note the extra sample volume is due to MS/MSD collection).

The Cayuse had a mechanical issue this morning and is currently under repairs. It is uncertain if repairs will be completed in time for sampling today.

Jason Silvertooth
